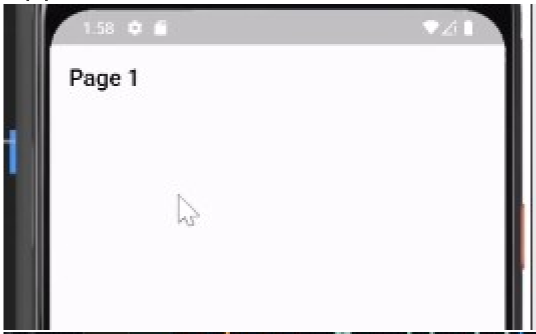
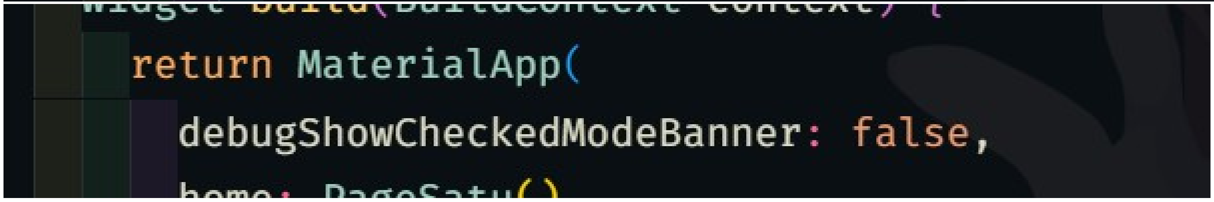
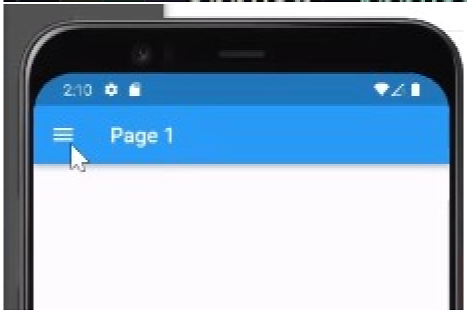
Appbar





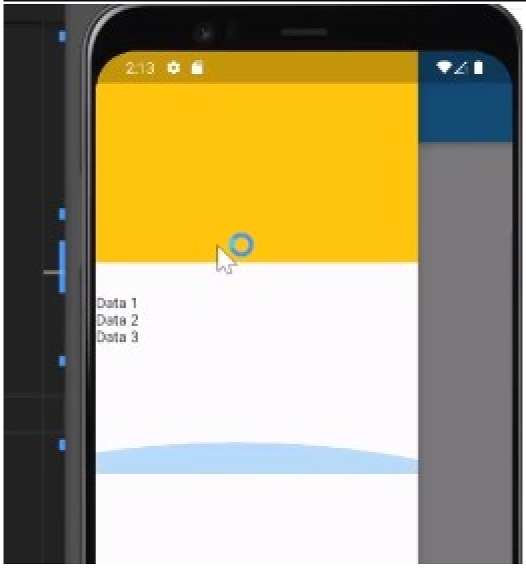
Widget drawer()

```dart
Widget build(BuildContext context) {
  return Scaffold(
    drawer: Drawer(
      child: Column(
        children: [
          Container(
            height: 200,
            color: Colors.amber,
          ) // Container
        ],
      ), // Column
    ), // Drawer
    appBar: AppBar(
```

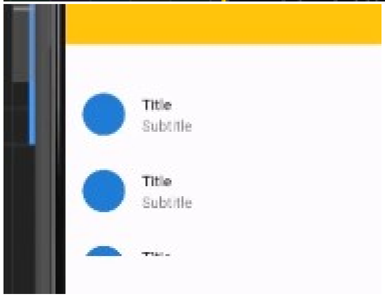


2:12

```
return Scaffold(
  drawer: Drawer(
    child: Column(
      children: [
        Container(
          height: 200,
          color: Colors.amber,
        ), // Container
        Container(
          height: 200,
          child: ListView(
            children: [
              Text("data 1"),
              Text("data 2"),
              Text("data 3"),
            ],
          ), // ListView
        ) // Container
```



```
    color: Colors.amber,
), // Container
Container(
  height: 200,
  child: ListView(
  children : [
    ListTile(
      leading: CircleAvatar(),
      title: Text("Title"),
      subtitle: Text("Substitle"),
    ), // ListTile
    ListTile(
      leading: CircleAvatar(),
      title: Text("Title"),
      subtitle: Text("Substitle"),
    ), // ListTile
  ],
  ), // ListView
), // Container
```



```dart
Expanded(
  // height: 200,
  child: ListView.builder(
    itemCount: 10,
    itemBuilder: (context, index) => ListTile(
      leading: CircleAvatar(),
      title: Text("Title"),
      subtitle: Text("Substitle"),
    ), // ListTile
  ), // ListView.builder
), // Expanded
```
